## Marks :

[\*1]: "+" means to press the Scroll key twice in rapid succession, [Scroll] ++ [Scroll] + [1] means to press the Scroll key twice in rapid succession,

Press the number "1" key again, the detection timeout between each hot key code is 2 seconds, if you press the Scroll key for the first time, press it again after more than 2 seconds

Press the Scroll key, then this hotkey combination is invalid.

[\*2]: "n" can be 1/2/3 numbers, "Scroll ++ Scroll + S + 1 + 2 + 0" means to press the Scroll key twice in rapid succession, and then press the number "S" Press the key and release it, press the number "1" key and release it, press the number "2" key and release it, press the number "0" key and release it, and set the polling time interval to 120 seconds.

[\*3]: After turning on the automatic detection function, the switch will automatically detect the connection of the computer's USB interface and perform smart switching.

If it detects a new computer's USB interface connection, it will automatically switch to the newly connected computer; if it detects the

If the USB interface is disconnected, it will automatically switch to the next connected computer. If it is detected that the USB interface of a non-enabled computer is disconnected

The connection does not switch. If the automatic detection function is turned on, and then the automatic polling scan function is turned on, it will automatically skip the unconnected USB

Computer.

[\*4]: "CTRL" and "SHIFT" can be used regardless of left or right.

[\*5]: The hot key [Ctrl + Shift + 1] means that it will not be released after pressing the "CTRL" key, and will not release after pressing the "SHIFT" key, and then press the number "

1" key, then release all keys.

[\*6]: By default, the switch of the pass-through USB port is synchronized with the switch of the USB keyboard and mouse, that is, the keyboard and mouse switch to PC1, the pass-through port

The USB devices on the switch to PC1 at the same time. If you turn off the direct USB port to follow the keyboard and mouse synchronization switching function, then when switching the keyboard and mouse,

The device with the pass-through USB port still stays on the original PC, unless the hot key to switch the device with the pass-through USB port alone is used to switch.
